Recall #: N242471620 | Momentary Rear Wheel Lock-Up or Low-Speed Change in Intended Direction Recall Date: 2024 Nov 07

Recall Description
 General Motors has decided that a defect which relates to motor vehicle safety may exist in certain 2022 - 2023 model year Chevrolet Express and GMC Savana vehicles with certain engine / transmission combinations. Affected powertrain combinations include the 4.3L V6 engine with 8-speed automatic transmission (RPOs LV1/M5U) and the combination 4-cylinder engine with 8-speed automatic transmission (RPOs

LWN/MQD). The transmission control module software in these vehicles is incorrectly calibrated to respond to certain electrical failures within the transmission. If these electrical failures are present when the transmission is performing certain shift operations, these miscalibrations can cause harsh shifting or reduced power or may result in unintended deceleration or rear wheel lockup. In rare circumstances at low speeds, the vehicle may move in an unintended direction. If the rear wheels lock-up momentarily while driving or the vehicle moves in an unintended direction at low speeds, there is increased risk of a crash.

Remedy

Dealers will update the transmission control module software calibration.
